Treace™ Cancellous Wedges

Engineered for Strength and Correction.

Represented By:

TREACE
Medical Concepts, Inc.
A Step Ahead.™

- **Ready to use**
  Prehydrated in sterile saline eliminates intraoperative preparation
- **Reliable strength**
  Every lot tested to meet compressive strength requirements[1]
- **Preshaped grafts**
  Uniquely designed to facilitate desired correction

Lapidus Allograft Wedges

2-degree design facilitates plantarflexion and intermetatarsal angle correction.[2]

Cotton Allograft Wedges

Pre-sized and designed for Cotton osteotomies.

Evans Allograft Wedges

Pre-sized and designed for Evans osteotomies involving lateral column lengthening.

MTP Allograft Wedges

Cup and cone design compatible with Treace™ reamers.[2]

1. *Minimum compressive strength criteria is set at 3 MPa. Berkeley Advanced Biomaterials data on file. | 2.TMC Data on File

Trial Sizers

Allows surgeon to view the correction visually and fluoroscopically to ensure appropriate size wedge.

Before use of the allografts or trial sizers, the surgeon should refer to the appropriate instructions for use for complete warnings, precautions, intended use, contraindications, and adverse reactions. Risks associated with the allograft wedges include, but are not limited to: infection, inflammatory response, deformity of the bone at the site, and potential for transmission of infectious disease. If any of these occur, additional treatments may be needed. Additional information about risks, warnings, and instructions can be made available directly from Berkeley Advanced Biomaterials or by contacting Treace Medical Concepts, Inc. at 904-373-5940 or cs@treace.net.
